

MIT Supply Chain Management Program Ranked No. 1 in the World

Program Awarded Top Spot for a Third Year

By SCMR Staff · July 3, 2018

The Master's Program of MIT Global SCALE (Supply Chain and Logistics Excellence) Network has been ranked as the world's No. 1 graduate business program in supply chain and logistics by Eduniversal. The Paris-based global rating agency for higher education ranked the MIT SCALE master's program as No. 1 for the third time.

The SCALE network of supply chain management research and education includes centers in Spain, Luxembourg, Colombia, Malaysia, and China, in addition to MIT. The centers were launched by the MIT Center for Transportation and Logistics. Their educational offerings are based on MIT's 10-month master's in supply chain management program, which has been educating supply chain professionals for over 20 years

Business professionals from around the globe enroll in the top-ranked programs offered by the SCALE network to hone their supply chain expertise and advance their careers. They learn the latest supply chain management methods, engage in cutting-edge research, and interact with industry through site visits, lectures from C-level executive speakers, and dozens of recruiting opportunities. In January every year all students from across the global network convene at MIT for an intensive month-long course

SCALE Network graduates are in high demand in a wide range of industries. This year's graduates have already accepted positions with leading firms such as Amazon, Apple, Tesla, Cummins, Samsung, Pfizer, Johnson & Johnson, Roche, Maersk, and more.

"A company's ability to efficiently manage its supply chain has become a key competitive differentiator across the globe. Our supply chain management program, which is consistently ranked as a world leader, is providing the supply chain talent that companies need to thrive in today's highly demanding commercial environment," says Yossi Sheffi, the Elisha Gray II Professor of Engineering Systems at MIT and director of the MIT Global SCALE Network.

“We are delighted to be ranked number one in the world for the third year in a row.”

In addition to its 10-month program, MIT Center for Transportation and Logistics also offers a MicroMasters credential in supply chain management. Through five online courses and a capstone exam, learners get access to an advanced, professional, graduate-level foundation in supply chain management comparable to one semester’s worth of coursework at MIT with the same faculty members. The program offers a unique path to education at MIT and across the SCALE network, whereby MicroMasters certificate holders have the opportunity to apply to MIT, as well as the Spain and Malaysia centers, to complete a Master’s degree in only five months. 2018 marks the first class to complete this pioneering program.
